Scott, FYI.

I just got off the phone with Ken. Ken asked for your email so he could help move things forward.

They are scratching the "scouting & probing" approach in hopes to receive approval on the D/U tomorrow. They will just need to revisit if we don't approve their request.

On the porewater H&S, they are doing the work in conjunction with the surface sediment sampling. Ken will be sending over a change request to have the surface sediment H&S apply to porewater. Please let me know if there is any initial concerns.

Thanks,

Davis Zhen, Manager

Hi Davis.

Ken sent the RLSO of the main surface sediment FSP, which we already have. We're looking for an RLSO of the D/U Reach FSP Addendum.

They may not have it because the revised one is an entirely different document from the original with different formatting. A lot of the original text was probably just copied over from the original to the revised, but we thought we'd ask to help expedite our review.

Scott

Davis,

Attached is the RLSO...my apologies.

Will address the remaining comments in a bit but wanted to get this to you right away.

Subject: D/U review

Ken,

Based on your updated schedule EPA has the following questions/comments:

1. Why were US Moorings and JR Simplot sampling efforts crossed out? Have the Pre-RD Group been unable to obtain access permits for sampling these areas?
2. What is the scope of the D/U probe and scouting now mentioned in the schedule for tomorrow 6/26 and Wednesday 6/27 for the vessel Cayuse? Based on our initial review to-date, EPA does not see this described in the updated FSPs (both the main FSP and the FSP addendum) and would require the scope of any new activity be provided for EPA review and approval.
3. To expedite review of the FSP addendum, EPA would appreciate an RLSO of the D/U FSP addendum. There appear to be some sections with significant revision and it would expedite EPA's review if we could review the specific track changes.

Thanks,
